

Gabriel Barbosa da Silva

Full Stack Developer · Systems Automation · Artificial Intelligence

+55 (11) 99440-7006 | gabriel.barbosa79@outlook.com | [LinkedIn](#) | [GitHub](#) | [Portfolio](#)

PROFESSIONAL SUMMARY

Full Stack Developer with 3 years of experience delivering end-to-end systems — from architecture to deployment — in real corporate environments. Specialist in operational process automation, API integrations, and internal tooling with measurable business impact. I work across the full stack: requirements gathering, data modeling, frontend, backend, infrastructure, and security. With a growing focus on Artificial Intelligence, I have already built and operate an AI agent in production, and actively contribute to language model training. Fluent in technical English with hands-on experience collaborating with international teams (Russia and South Africa).

EDUCATION

Bachelor's Degree in Software Engineering · FIAP 2026 – 2029

Associate's Degree in Multiplatform Software Development · FATEC Zona Leste 2023 – 2025

Technical Degree in Industrial Automation · ETEC Martin Luther King 2020 – 2022

PROFESSIONAL EXPERIENCE

Scope Technology · 2023 – Present · São Paulo, Brazil

Technical Support Analyst & Internal Software Developer (Hybrid)

- Designed and built **5+ internal systems from scratch**, serving as sole owner of architecture, frontend, backend, database, infrastructure, and security.
- Built an **Operational Control System** (React + TypeScript + Node.js + MongoDB) centralizing installation scheduling previously managed across disconnected spreadsheets — **30 active users, ~4,000 records/month**, daily rework eliminated.
- Developed an automated invoice issuance system integrated with Zoho and the Nuvem Fiscal API: **reduced 2 hours of daily manual work** and eliminated issuance errors.
- Built Python RPAs to automate repetitive daily tasks in web systems: **eliminated 3h/day of manual processes entirely**, with built-in fault tolerance (timeouts, pop-ups).
- Developed an internal batch operations API that reduced tasks from ~4 hours to **under 40 seconds** (e.g., deletion and reassignment of 800+ client records).
- Built an **AI support agent** (Gemini API + custom context module): automatically handles tickets, creates users, and diagnoses technical issues using a trained knowledge base.
- Served as **technical liaison with the international R&D team** (Russia and South Africa), conducting meetings in English for bug triage, feature alignment, and system integrations.
- Optimized IoT tracker testing workflow by **30%** through an agile testing methodology (initial role as IT intern).

Outlier · 2025 – Present · Remote (US)

Expertise Coder — AI Training

- Critical evaluation and refinement of large language model (LLM) outputs in coding and natural language tasks (EN/PT), contributing directly to the **RLHF (Reinforcement Learning from Human Feedback)** cycle.
- Review, debugging, and refactoring of AI-generated code across multiple languages, ensuring correctness, best practices, and performance.

- Technical quality assessment of AI outputs across multiple domains, with focus on accuracy, coherence, and logical reasoning.
- Creation of **challenging prompts and test cases** to identify model limitations and undesirable behaviors.

Freelance · 2024 – 2025

English Tutor

- Delivered hybrid English lessons with a structured virtual learning environment on Discord for ongoing student support.

TECHNICAL SKILLS

Frontend: React, TypeScript, JavaScript, shadcn/ui, Ant Design, React Query, HTML, CSS

Backend: Node.js, Python, FastAPI, REST APIs, RPA (Selenium/Playwright)

Database: MongoDB, MongoDB Atlas

Infra & Deploy: Vercel, Render, Docker (basic), Git, GitHub

AI & Integrations: Gemini API, RLHF, Prompt Engineering, Zoho API, SEFAZ/NF-e, Webhooks

Tools: Figma, VS Code, Postman, Notion, Cursor, Claude Code

Languages: Portuguese (native), English (advanced — technical and conversational)

FEATURED CERTIFICATIONS

- **Google Cloud Computing Foundations Certificate** – Google Cloud · May 2024
- **AWS Academy Graduate — Cloud Foundations** – AWS · May 2024
- **Microsoft Azure Fundamentals (AZ-900)** – Microsoft · Mar 2025
- **Google Cloud: Infrastructure in Google Cloud** – Google · May 2025
- **Google Cloud: Networking & Security in Google Cloud** – Google · May 2025
- **Create IoT Service for Cloud-Native Apps (IoT Central)** – Microsoft · Sep 2025
- **Orchestrate Containers for Cloud-Native Apps with AKS** – Microsoft · Sep 2025

* 20+ certifications — full list available on LinkedIn

FEATURED PROJECTS

Operational Control System · Scope Technology

React · TypeScript · Node.js · MongoDB · shadcn/ui · Ant Design · Vercel · Render

Full stack platform that replaced a critical workflow previously managed across disconnected spreadsheets. Includes client and device registration, multi-user scheduling, field installation validation, real-time dashboards, role-based access control, and batch processing (import and batch updates). Running in production with memory optimization on a resource-constrained environment.

► **30 active users · ~4,000 records/month · 100% of spreadsheets replaced**

AI Technical Support Agent

React · TypeScript · Node.js · Gemini API · MongoDB

Chatbot with a custom context module and ML layer trained on the company's technical knowledge base. Automatically handles support tickets, performs operational actions (e.g., user creation), and diagnoses platform, installation, and IoT device issues.

Automated Invoice Issuance System

Node.js · Zoho API · Nuvem Fiscal API · SEFAZ

Integration between the order management system (Zoho) and the Nuvem Fiscal API. Orders flagged for invoice issuance are automatically identified and batch-processed, replacing manual issuance through the Sebrae government portal.

► **-2h/day · zero issuance errors · 100% automated**

Internal Batch Operations API

[Node.js](#) · [REST API](#) · [Dynamic token-based authentication](#)

Custom interface built on top of the platform's API to enable operations not available in the UI: custom reports, mass data operations, and multi-client management with dynamic token generation per account selection.

► **4h → under 40 seconds on high-volume operations**

Process Automation RPAs

[Python](#) · [Selenium/Playwright](#) · [Error handling and retry logic](#)

Automation scripts that execute repetitive daily tasks in web systems (record creation, cancellation, and updates). Built with fault tolerance for system failures such as timeouts and unexpected pop-ups.

► **-3h/day · 100% of manual processes eliminated · zero execution errors**

CampusFace — Smart Access Control System

[Kotlin](#) · [Spring Boot](#) · [React Native](#) · [Python](#) · [Microservices](#)

Multiplatform university access control system developed as a capstone project (TCC) at FATEC Zona Leste. Combines dynamic QR Code authentication (30s expiration) with real-time facial recognition. The mobile app (Kotlin + React Native MVP) allows users to view their organizations, access history, and personal QR Code; the validator mode reads QR codes and performs facial recognition to grant access. The facial recognition microservice was built from scratch in Python. Also includes a multiplatform desktop app for building and turnstile administration.

► **Selected to represent FATEC Zona Leste at FEITEC · Under evaluation by institutional leadership for production deployment**

Freelance — Corporate Landing Pages

[React](#) · [JavaScript](#) · [HTML/CSS](#) · [Tailwind](#)

Development of responsive, modern landing pages for clients across different industries (custom furniture, industrial machinery, and others). Focus on high-quality UI, performance, and integrated features: contact forms, WhatsApp integration for quotes, email submission, product registration, and admin dashboards. All projects delivered functional and tailored to each client's brand identity.

Point of Sale System

[React](#) · [Node.js](#) · [MongoDB](#)

Complete point-of-sale (POS) system with barcode scanning, real-time inventory management, cash register open/close workflow, product registration, operator and admin role control, and a reports and analytics dashboard. Operates as a full retail checkout system with additional operational management layers.
